

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Natural Science Material

MICROSCOPE SLIDES. We carry in stock ready for immediate delivery over 2000 different preparations for Botany, Zoology, Histology, Bacteriology, etc. Special slides made up to order.

Write for catalogue A No. 29.

SPECIAL:

Slides of Hook Worm.
Serial Sections of Embryo of Pig.

We also supply material for **Entomology, Mineralogy, Paleontology, Human Anatomy, Vertebrate and Invertebrate Zoology, etc.**

Circulars in all departments free upon request.

Your Correspondence is Solicited.

New Spencer Microscope No. 44H

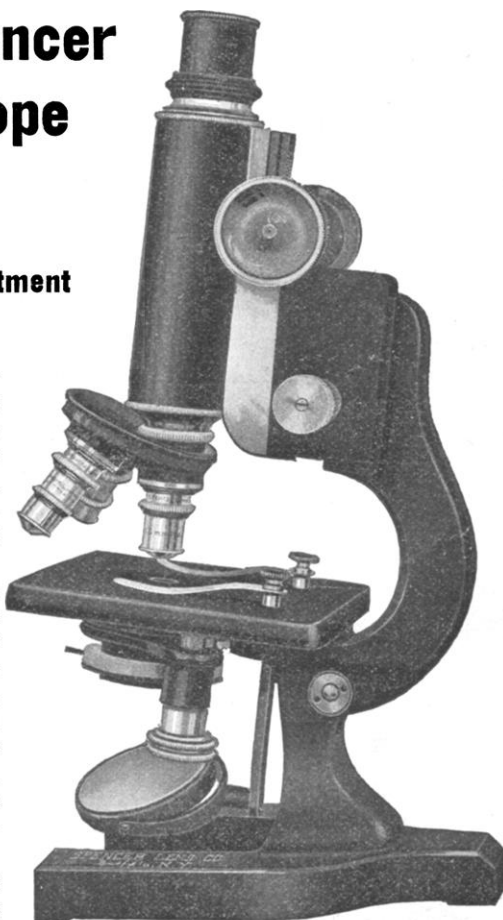

with

Side Fine Adjustment

(Lever Type)

Built with the regular Spencer low compact construction, affording ease and comfort in use, black lacquered body tube which avoids reflection of light into the eyes, seamless vulcanite rubber covered stage of large size, upper iris diaphragm automatically locked when Abbe condenser is in place, fine adjustment with a positive stop, all lacquered parts both black and yellow alcohol proof.

The construction of fine adjustment is mechanically of the highest efficiency and durability, arrived at after more than ten years experience in building side-fine adjustments. We guarantee it to give no lost motion or side thrust. It ceases to act when objective touches the cover glass.

NEW SPENCER MICROSCOPE No. 44H

Equipped with two oculars, three objectives 16 mm., 4 mm. dry and 1.8 mm. oil immersion, triple nose piece, quick-screw substage, Abbe condenser with double iris diaphragms, complete in beautiful mahogany cabinet.....

\$65.00

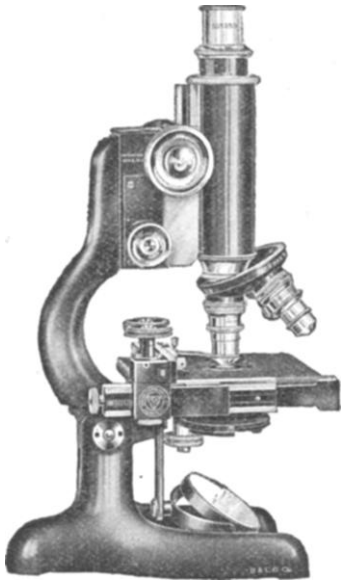

**More than 10 years' experience
in building side-fine adjustments.**

A Workman's Tools

The Old Adage on cause and effect, can be paraphrased, "A Microscopist is judged by his Microscope." An instrument yields results in harmony with its quality.

Microscope FFS \$67.50

Completely equipped—2 eyepieces, 3 objectives, 16 mm, 4 mm, 1.9 mm on dust-proof nosepiece, Abbe condenser, 1.20 N. A., 2 iris diaphragms.

Mechanical Stage, additional, \$16.00

Bausch^{and} Lomb Microscopes

represent the development of 60 years of quality production.

MICROSCOPE FFS 8 is the latest model of the series, having the long curved arm which leaves the stage entirely free for manipulation of the object—most conveniently accomplished by the attachable Mechanical Stage.

THE side fine adjustment is of the lever type with two heads. It has twice the sensitiveness of other fine adjustments and ceases to operate when the objective touches the slide. Positive stops indicate the upper and lower limits of motion and all parts are thoroughly dustproof.

THE MECHANICAL STAGE attaches to any rectangular stage. The scales are graduated in single millimeters with verniers reading to tenths. Pinion heads close together in fixed relative position. Accommodates any slide up to 95 mm in length.

DESCRIPTIVE LITERATURE ON REQUEST

SPECIALIZATION is by no means a selfish isolation in a narrow line of interests, but rather it consists in making one's greatest interest the axis for the grouping of the others. The conditions of modern life have settled it for us that the only well-educated man is a specialist, one who knows something well, it matters not so much what, and has sympathy for other things.—*Dr. William F. Ganong.*

Every technical specialist in Microscopy has a sympathy for "other things"—amateur and elementary microscopy, also for all other departments of Nature Study.

You, Specialist, may please your "sympathy" and aid a Good Cause by active interest in

THE GUIDE TO NATURE

This monthly, illustrated magazine is devoted not to extreme knowledge but to "uncommon interest."

OPTIC PROJECTION

By **Simon Henry Gage, B.S., and Henry Phelps Gage, Ph.D.**

This volume of over 700 pages and 400 illustrations deals comprehensively with the principles and use of all forms of projection apparatus—the Magic Lantern, the Projection Microscope, the Opaque Lantern and the Moving Picture Machine.

Special emphasis is given to projection with the microscope for class-room instruction in Histology and Embryology, and for drawing with all powers from the lowest to the highest.

POSTPAID, \$3.00

THE MICROSCOPE

**AN INTRODUCTION TO MICROSCOPIC METHODS
AND TO HISTOLOGY, 11TH EDITION.**

By **Simon Henry Gage**, Professor of Histology and Embryology, Emeritus in Cornell University. 8vo. XVI + 359 pages. 265 illustrations. Postpaid \$2.00.

A Guide for every one who uses the microscope, and for every student who wishes to learn to use the microscope intelligently and effectively.

Send for circulars giving contents, specimen pages and illustrations of these and other Nature Study Books.

ASTRONOMY

WITH and WITHOUT A TELESCOPE

Estimated number of stars visible without telescope 3,000.
Estimated number of stars visible with Watson's 3-inch telescope 324,000.—SIR R. BALL.

The beauties of the heavens have been adored over and over again by those who have never seen through a Telescope; what must be the attitude of those who find, even with a 3-inch Watson's Century Telescope, the number of visible stars increased a hundred fold? **Every household should have a Telescope,** and Watson's "Century" Instruments have been specially designed for the use of the Amateur, for

no Observatory is necessary, and they are easily carried. Also the Objectives are of the celebrated Watson-Conrady Series, Type III., giving the finest possible optical effect.

PRICES—

Watson-Conrady Telescope, on Tripod Stand, with Finder, as figured, with two Astronomical and one Terrestrial Eyepieces, Dew Cap, and Case for Telescope, of best construction throughout—

Aperture of Object Glass
